

SF SERIES Filter driers with replaceable solid core Mechanical filters with replaceable filtering block

For refrigeration plants that use HCFC, HFC or HFO refrigerants

Applications

The filters in series SF411 and SF412, illustrated in this leaflet, are designed for installation on liquid line and on suction line of commercial refrigeration systems and civil and industrial air conditioning plants that use the following refrigerant fluids:

- HCFC (R22)

- HFC (R134a, R404A, R407C, R410A and R507)
- HFO and HFO/HFC mixtures (R1234ze, R448A, R449A, R450A, R452A and R513A)

belonging to Group 2, as defined in Article 13, Chapter 1, Point (b) of Directive 2014/68/EU, with reference to EC Regulation No. 1272/2008.

For specific applications with refrigerant fluids not listed above, please contact Castel Technical Department.

Operation

Dehydrating filters, liquid line: A large ring area between the cartridge and the inner surface of the filter allows for the accumulation of solid particles and prevents clogging. Before leaving the filter, the refrigerant fluid must pass through the mesh sieve in which cartridges are mounted. This eliminates the danger that small particles of drying material be dragged into circulation.

Mechanical filters, suction line: Good filtering of the refrigerant on the low-pressure side of the system is an absolute guarantee of protection for the compressor. System cleanliness is ensured by micro filtering cores, which filter out every kind of impurities derived from manufacture and assembly of the refrigerating system.

Construction

Dehydrating filters, liquid line: are manufactured with a zinc plated steel cover, zinc plated screws, and the steel body is equipped with brazing connections made from copper pipe EN 12735-1 – Cu-DHP.

They are sold in the following two configurations:

- Codes with an "A" suffix , equipped with 1/4" NPT threaded cover for mounting an access fitting with valve core, not included in the supply.
- Codes with an "B" suffix , equipped with blind cover.

Cartridges in series 4490, type A and type B, are made from moulding a dehydrating filler, made completely from 3 Å molecular sieves, with a suitable binder.

Cartridges in series 4490, type AA and type AB, are made from moulding a dehydrating filler, made from 80% 3 Å molecular sieves and 20% activated alumina, with a suitable binder.

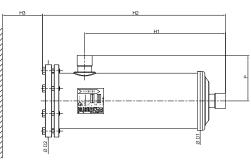

Cartridges in series 4490 must be ordered separately from the filter. They are supplied in individual packages, which are hermetically sealed in metal containers. These types of packaging are suitable for long-term storage of the cartridge. Each cartridge is supplied with two synthetic gaskets to be used as a seal between the two cartridges and between the cartridge and its covers.

Mechanical filters, suction line: are manufactured with a zinc plated steel cover, stainless steel screws, and the steel body is equipped with brazing connections made from copper pipe EN 12735-1 – Cu-DHP.

They are sold in the configuration with 1/4" NPT threaded cover for mounting access fitting with valve core kit G9150/ R05, included in the supply.

Cartridge 4495: characterized by a large filter surface, these consist of metal mesh fabric with a controlled porosity filter sieve insert, which can retain solid particles to 20 microns. At both ends, soft felt gaskets ensure perfect seal with the plastic cups.

Cartridges in series 4495 must be ordered separately from the filter. They are supplied in individual packages, which are hermetically sealed in metal containers. These types of packaging are suitable for long-term storage of the cartridge.

(1) : Maximum values of the refrigerant flow capacity at which the drier can be used when fluid dehydration is not the a major problem, provided that the original moisture is limited before the installation of the drier.

The maximum refrigerant flow capacities are referred to a total pressure drop of 0,07 bar / 0,14 bar , inlet and outlet connections included, (according to ARI STANDARD 710-2009 - with liquid temperature at + 30 °C and evaporating temperature at - 15 °C)
